"Bacillus thuringiensis cryet4 and cryet5 toxin genes and proteins

"Bacillus thuringiensis cryet4 and cryet5 toxin genes and proteins

"Patchic to lepidopteran insects.",

Patcht number US5322687, 21-UNN-1994.

-I- FUNCTION: Promotes colloidosmotic lysis by binding to the midgueptient hilal cells of many lepidopteran larvae.

-I- DEVELOPMENTAL STRGE: The crystal protein is produced during sporulation and is accumulated both as an inclusion and as part
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Bacillus thuringiensis.

"Cloning of novel Bacillus thuringiensis delta-endotoxin.";

"Cloning of novel Bacillus thuringiensis delta-endotoxin.";

"Lonited (NOV-1994) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: Promotes colloidosmotic lysis by binding to the midgut epithalial cells of insects.

-!- FUNCTION: The crystal protein is produced during sporulation and is accumulated both as an inclusion and as part o

the spore coat.

-!- SIMILARITY: Belongs to the delta endotoxin family.

Pesticidial crystal protein crylBc (Insecticidal delta-endotoxin
CrylB(c)) (Crystaline entomocidal protoxin) (140 kDa crystal protein).
Name-crylBc; Synonyms=crylBc(c), crylBc;
Bacillus thuringiensis (subsp. morrison)).

PRT; 1233 AA.

\$888888	The present invention relates to novel insecticidal proteins obtained from Paecilomyces sp. (see AAB66895 to AAB66901 and AAB66913). The insecticidal proteins can be used to produce transgenic plants, which are insect-resistant. Also, the insecticidal proteins are useful for controlling insects by providing them at a locus where insects feed

```
The invention relates to insecticidal protein comprising an X-glycine motif at the amino-terminus. Polynucleotide or DNA constructs of the invention are useful for producing plants or plant parts that are resistant to insects. The protein or synergistic combination is useful as an active ingredient of a pesticide or for controlling insects. Antibodies raised to the insecticidal proteins can be used to identify other proteins with insecticidal activity. The present sequence is Bacillus thuringtensis insecticidal crivity. The present sequence is sequence is used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           360 WGGHKLEFRTIGGTLNISTQGSTNTSINPVTLPFTSRDVYRTESLAGLNLFLTQPVNGVP

```
The present invention relates to novel insecticidal proteins obtained from Paccilomyces sp. (see AAB6689) to AAB66901 and AAB66913). The insecticidal proteins can be used to produce transgenic plants, which are insect-resistant. Also, the insecticidal proteins are useful for controlling insects by providing them at a locus where insects feed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     VTALFTSTNPRGLKTDVKDYHIDQVSNLVESLSDEFYLDEKRELFEIVKYAKQLHIERNM

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to novel insecticidal proteins obtained from Paecilomyces sp. (see AAB66899 to AAB66901 and AAB66313). The insecticidal proteins can be used to produce transgenic plants, which are insect-resistant. Also, the insecticidal proteins are useful for controlling insects by providing them at a locus where insects feed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       119
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     179

motif at the amino-terminus. Polynucleotide or DNA constructs of the invention are useful for producing plants or plant parts that are resistant to insects. The protein or synergistic combination is useful as an active ingredient of a pesticide or for controlling insects. Antibodies raised to the insecticidal proteins can be used to identify other proteins with insecticidal activity. The present sequence is Bacillus thuringiensis insecticidal activity, The present sequence is sequence is used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             VTALFTSTNPRGLKTDVKDYHIDQVSNLVESLSDEFYLDEKRELFEIVKYANELHIERNM

                                                                                                                                                                                                                                                                  629
                                                                                                                                                                                                                                                                                                    629
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to novel insecticidal proteins obtained from Paccilomyces sp. (see AAB66899 to AAB66901 and AAB66913). The insecticidal proteins can be used to produce transgenic plants, which insect resistant. Also, the insecticidal proteins are useful for controlling insects by providing them at a locus where insects feed

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to insecticidal protein comprising an X-glycine motif at the amino-terminus. Polynucleotide or DNA constructs of the invention are useful for producing plants or plant parts that are resistant to insects. The protein or synergistic combination is useful as an active ingredient of a pesticide or for controlling insects. Antibodies raised to the insecticidal proteins can be used to identify other proteins with insecticidal activity. The present sequence is Bacillus thuringiensis insecticidal crystal endotoxin (GRY) protein. This sequence is used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                STGLNNLRGTNAESWVRYNQFRRDMTLMVLDLVALFPSYDTQMYPIKTTAQLTREVYTDA 299

The invention relates to insecticidal protein comprising an X-glycine motif at the amino-terminus. Polynucleotide or DNA constructs of the invention are useful for producing plants or plant parts that are resistant to insects. The protein or synergistic combination is useful as an active ingredient of a pesticide or for controlling insects. Antibodies raised to the insecticidal proteins can be used to identify other proteins with insecticidal activity. The present sequence is Bacillus thuringienes; sinsecticidal crivity. The present sequence is sequence is used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        360 WGGHKLEFRTIGGTINISTQGSTWTSINPVTLPFTSRDVYRTESLAGLNLFLTQPVNGVP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The sequence is B. thuringiensis (Bt) crystal protein Crylla, the DNA encoding which was mutated to allow cloning of domain III or domains I and II, to make the hybrid protoxins of the invention. The hybrid toxins of the invention, having structural domains I, II and III in this order starting from the N-terminal derived from at least 2 different crystal proteins, are useful for protecting plants against pest insects, e.g. moths, butterflies and Colorado potato beetle or for combating insects
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1 MKLKNODKHOSFSSNAKVDKISTDSLKNETDIELONINHEDCLKMSEYENVEPFVSASTI 60

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          629
be used to produce transformants B.coli strain MC12022/pJH12 (NCIB 40278, or bacteriophage EMBL4 vector (NCIB 40279) or E.coli strain BL21/pJH11 (NCIB 40275). The delta-endo- toxin produced by the transformants can be used in formulations for combatting Lepidoptera and Coleoptera pests. (Updated on 25-MAR-2003 to correct PA field.) The invention relates to insecticidal protein comprising an X-glycine motif at the amino-terminus. Polynucleotide or DNA constructs of the invention are useful for producing plants or plant parts that are resistant to insects. The protein or symergicic combination is useful as an active ingredient of a pesticide or for controlling insects. Antibodies raised to the insecticidal proteins can be used to identify other proteins with insecticidal activity. The present sequence is sequence is used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                119

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to novel insecticidal proteins obtained from Paecilomyces sp. (see AAB66899 to AAB66901 and AAB66913). The insecticidal proteins can be used to produce transgenic plants, which are insect-resistant. Also, the insecticidal proteins are useful for controlling insects by providing them at a locus where insects feed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              QTGIGIAGKILGTLGVPFAGQVASLYSFILGELWPKGKNQWEILFMEHVEE-INQKISTY 119

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          719
         The invention relates to a novel Bacillus thuringiensis cryl gene, gene combination, expression vector, nucleotide sequence of the B thuringiensis cryl gene with high-toxicity to lepidoptera peets and the amino acid sequence of the protein encoded by it, cooperative use of the cryl gene with the expression product of crylab or crylBa, primer sequences for expressing the genes, and the constructed shuttle vector pSX422b. The gene in combination with the crylab or crylab genes displays high toxicity to the lepidoptera, coleoptera and diptera pests. The present sequence represents the cryllel protein.
                                                                                                                                                                                              9

                                                                                                                                                                                                                                                                                                                          9
The present invention relates to novel insecticidal proteins obtained from Paecilomyces sp. (see AAB66899 to AAB66901 and AAB66913). The insecticidal proteins can be used to produce transgenic plants, which insect-resistant. Also, the insecticidal proteins are useful for controlling insects by providing them at a locus where insects feed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           120 ARNKALSDLRGLGDALAVYHESLESWVENRNNTRARSVVKNQYIALELMFVQKLPSFAVS

```
The invention relates to insecticidal protein comprising an X-glycine motif at the amino-terminus. Polynucleotide or DNA constructs of the invention are useful for producing plants or plant parts that are resistant to insects. The protein or synergistic combination is useful as an active ingredient of a pesticide or for controlling insects. Antibodies raised to the insecticidal proteins can be used to identify other proteins with insecticidal activity. The present sequence is Bacillus thuringiensis insecticidal crivity. The present sequence is sequence is used in the invention
                                                                                                                                                                                                                                                                 629
                                                                                                                                                                                                                                                                                                                             629

parasporal crystal protein crylFa3 - Bacillus thuringiensis
C;Species: Bacillus thuringiensis
C;Date: 20-Feb-1995 #sequence_revision 20-Feb-1995 #text_change 09-Jul-2004
C;Accession: $32649
R:Lambert, B.
submitted to the EMBL Data Library, April 1993
A;Reference number: $32645
A;Accession: $32649
A;Status: preliminary
A;Molecule type: DNA
A;Status: preliminary
A;Crase-references: UNIPROT:045749; EMBL:Z22512; NID:g295865; PIDN:CAA80235.1; PID:g29586
C;Superfamily: parasporal crystal protein
C;Sywords: delta-endotoxin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         14;
